Invalidate LDAP User Cache API

Dremio v15.0+ provides the `/api/v3/cache/authorization/{USER-NAME}` API to invalidate the authorization of a single user or **all** users in the LDAP user cache. If no username is provided, Dremio invalidates the authorization for all users in the cache. You must be a Dremio administrator to successfully call this API. Group names are not yet supported.

Syntax

```
curl -X DELETE http://{DREMIO-HOST}/api/v3/cache/authorization/{USER-NAME} -H "Authorization:_dremio{auth-token}" -H
"Accept:application/json"
```

`{USER-NAME}` may contain one username or be left blank to query all users in the LDAP user cache.

Example Request

```
curl -X DELETE http://{DREMIO-HOST}/api/v3/cache/authorization/{jsmith} -H "Authorization:_dremio{auth-token}" -H
"Accept:application/json"
```

Example Response

```
{
    "status": "204",
    "description": "no content",
    "statusChanged": "deleted"
}
```
